Dear Dr. Yeatley:

This letter is to notify you that we are offering for sale Creatine as a dietary supplement. It contains the following structure/function statements: Promotes Powerful Workouts...A monumental development in sports nutrition, creatine monohydrate is used by those athletes with the desire to boost strength and endurance and build lean muscle mass. Creatine is involved in the function of muscle contractions, while helping the body replenish its ATP stores. ATP is a form of energy stored in the muscles and plays a key role in sustaining explosive muscular contractions. It is the fuel source responsible for decreasing muscle fatigue, enabling prolonged intensity while promoting strength building and powerful workouts.

Our label contains the proper disclaimer as well.

Thank you.

Patricia Tolentino
